

flexVDI Client 3.0 User Manual

The communication between the flexVDI platform and flexVDI clients have not changed from version 2.2 to version 3.0. For this reason, you can use any client from version 2.2 with a flexVDI 3.0 platform.

flexVDI provides clients to access the virtual desktop infrastructure from the following environments:

- Microsoft Windows (Windows XP, Vista, 7, 8 y 10, in both 32 and 64 bits)
- GNU/Linux (any distribution after 2010)
- Mac OS/X
- Android
- IOS
- Live USB, a bootable Linux distribution (BIOS and UEFI) for Thin Clients and repurposed computers.

In this manual we present the characteristics and details of all of them.
